

iBase Clients

1 Introduction

iBase Media Services are specialists in digital image database software and media asset management systems. They can be used across a wide range of applications from administration of in-house assets to online picture or image library websites with full e-commerce capability.

Catalogue, index, organise, manage and display still and moving images, sound clips or any other kind of file, for example a Word document or a PDF.

iBase image systems, website products, and media asset software are used by organisations large and small who recognise the value of creating a database system and organising and managing their valuable digital assets. Clients range from centres of art, culture, science and academic excellence, to picture libraries, commercial enterprises and local authorities.

2 Clients

We are proud of our many distinguished customers.

The links below are to URLs - where publicly available - of sites supplied by iBase Media Services. Many customers have systems with URLs only available within their own organisation.
