iBase Trinity - digital asset management and multimedia online library

Section map : Features Guide - **Outline** - Summary - Details

iBase Trinity is an online Library and multimedia digital asset system, supporting all standard file types including images, video, audio, Microsoft Office documents, PDFs etc...

Our picture library & digital asset management demonstration site illustrates some of the browsing and searching features available to general users - depending upon how your system is configured.

See more examples at our clients' sites.

Systems can be installed on your own internal network, or with your own website supplier, or iBase hosting services can take care of it for you.

Use Trinity media management software, configured to your requirements, for:

- Commercial libraries with eCommerce for image, videos, audio and other file types.
- Museum and gallery media asset management and cataloguing, with internal or public searching and viewing.
- Digital asset management and sharing with controlled access for internal and external agencies.
- Managing digital assets on the web, or an intranet, or on both at the same time with different sets of content on each from the same source database.
- Intranet or web based brand asset management software - configured to your exact requirements.
- Making your collections available to others with federated searching of web based digital assets. (A federated search is the simultaneous searching of multiple online databases.)
- Any other digital asset management requirement.

iBase offers a wide range of services, from implementation of digital asset management software through support and hosting to a fully managed service where we do absolutely everything for you. The choice is yours.

Prices

Price options include deferred payment arrangements and licence rental subscription plans.
