iBase Hosting

The iBase asset hosting service can be used for publicly available picture libraries on the web, or for an organisation's internal media asset management and distribution requirements.

Features

- Robust and secure.
- High bandwidth ensures a fast and responsive experience for users.
- iBase's own web servers are installed in a secure data centre with uninterruptible power supplies and a standby generator.
- The web servers are dual clustered with automatic fail-over if a primary machine fails.
- All programs, data and digital assets images (images etc...) are backed up to tape every 24 hours.
- A robotic system rotates backup media daily from a pool of seven tapes.
- iBase monitors all hosted sites once every 45 seconds, and if any site fails to respond within the control time over a period of 135 seconds an email and SMS alert are sent to appropriate iBase personnel for attention 24/7/365.

Activity Logging

We recommend using Google Analytics to monitor use of your site. Just set up your own Google account - it's free - and send us the code snippet that Google Analytics creates for you.

Hosted sites

Sites hosted by iBase Media Services and which have publicly available URLs include:

- [Edinburgh City Libraries - Capital Collections](#)
- [Glasgow City Libraries - Virtual Mitchell](#)
- [Glasgow City Libraries - Lipton](#)
