## Online digital image and multimedia library

Section map: **Outline** - [Summary](#) - [Details](#)

iBase Online Library is not just simple photo library software or image database system, but a fully featured multimedia digital asset system, supporting all standard file types including images, video, audio, Microsoft Office documents, PDFs etc...

Our [picture library & digital asset management demonstration site](#) illustrates some of the browsing and searching features available to general users - depending upon how your system is configured.

See more [examples](#) at our clients' sites.

Systems can be installed on your own internal network, or with your own website supplier, or [iBase hosting services](#) can take care of it for you.

Use iBase media management software, configured to your requirements, for:

- Commercial libraries with eCommerce for image, videos, audio and other file types.
- Museum and gallery media asset management and cataloguing, with internal or public searching and viewing.
- Digital asset management and sharing with controlled access for internal and external agencies.
- Managing digital assets on the web, or an intranet, or on both at the same time with different sets of content on each from the same source database.
- Intranet or web based brand asset management software - configured to your exact requirements.
- Making your collections available to others with federated searching of web based digital assets. (A federated search is the simultaneous searching of multiple online databases.)
- Any other digital asset management requirement.

iBase offers a wide range of services, from implementation of digital asset management software through support and hosting to a [fully managed service](#) where we do absolutely everything for you. The choice is yours.

### [Prices](#)

Price options include [deferred payment](#) arrangements and licence rental [subscription](#) plans.
